Overview

Harlesh Marketplace is a custom Discord bot built specifically for the Harlesh CODM Marketplace community. It provides a structured ticketing system for buying and selling CODM accounts and devices, with full staff and vendor management, transcript logging, and role-based permissions.

Key Features

- Multi-category ticket system with custom form fields
 - Role-based permissions for Staff, Vendors and Device Vendors
 - Ticket claiming system — vendors claim tickets they want to handle
 - Automatic transcript generation with Discord-like HTML UI
 - Images and attachments saved in transcripts permanently
 - Easy server setup via a single `/setup` command
 - Vendor management via `/add-vendor` and `/remove-vendor`
-

Bot Setup

Requirements

Before setting up the bot in your server you will need the following:

- A Discord server where you have Administrator permissions
- The following roles created in your server:
 - `@Staff` — for admins and moderators
 - `@Vendors` — for CODM account vendors
 - `@Device Vendor` — for device sellers
- A channel category for tickets (e.g. `🎫 Tickets`)
- A private logging channel (e.g. `#logging`) visible only to staff

Running the Setup Command

Use the `/setup` command in any channel to configure the bot. You must be an **Administrator** to run this command.

```
/setup staffrole:@Staff vendorrole:@Vendors devicevendorrole:@Device Vendor  
category:#Tickets transcripts:#logging
```

Parameters:

Parameter	Description
<code>staffrole</code>	The role for your staff and admin team
<code>vendorrole</code>	The role for CODM account vendors
<code>devicevendorrole</code>	The role for device vendors
<code>category</code>	The channel category where ticket channels will be created
<code>transcripts</code>	The private channel where transcripts are saved after tickets close

Sending Ticket Panels

After running `/setup`, send the ticket panels to the appropriate channels:

In `#buy-an-account`:

```
/panel type: 🛒 Buy an Account
```

In **#sell-an-account**:

/panel type: 💰 Sell an Account

In your support channel:

/panel type: ? General Support

Ticket Categories

Buy a CODM Account

For members looking to purchase a CODM account from a vendor.

Form Fields:

1. What is your UID?
2. Stacked account or Mid account?
3. Budget/Selling Price?
4. What is linked to the account?
5. Do you have all logs access?

Pings: @Vendors

Sell a CODM Account

For members looking to sell their CODM account.

Form Fields:

1. What is your UID?
2. Stacked account or Mid account?
3. Budget/Selling Price?
4. What is linked to the account?
5. Do you have all logs access?

Pings: @Vendors

Buy a Device

For members looking to purchase a mobile device.

Form Fields:

1. What device are you looking for?
2. What is your budget?
3. Preferred condition?
4. What is your location?
5. Any additional details?

Pings: @Device Vendor

Sell a Device

For members looking to sell a mobile device.

Form Fields:

1. What device are you selling?
2. What is the condition?
3. What is your price?
4. What is your location?
5. Any additional details?

Pings: @Device Vendor

General Support

For general questions and help.

Form Fields:

1. What do you need help with?
2. How urgent is this?
3. Have you tried resolving this yourself?
4. Your in-game username?
5. Any additional details?

Pings: @Staff

Report a Vendor

For reporting scams or bad deals.

Form Fields:

1. Who are you reporting?
2. What happened?
3. How much were you scammed?
4. Do you have evidence?
5. When did this happen?

Pings: `@Staff`

Slash Commands

`/setup`

Configure the bot settings for your server.

Permission required: Administrator

```
/setup staffrole: vendorrole: devicevendorrole: category: transcripts:
```

`/panel`

Send a ticket panel to the current channel.

Permission required: Administrator

```
/panel type: [Buy an Account | Sell an Account | General Support]
```

`/add-vendor`

Register a vendor in the bot's vendor list.

Permission required: Administrator

```
/add-vendor user:@username name:Display Name
```

/remove-vendor

Remove a vendor from the bot's vendor list.

Permission required: Administrator

```
/remove-vendor user:@username
```

/add-user

Add a user to the current ticket channel.

Permission required: Staff, Vendor, or Device Vendor

```
/add-user user:@username
```

/remove-user

Remove a user from the current ticket channel.

Permission required: Staff, Vendor, or Device Vendor

```
/remove-user user:@username
```

Ticket Flow

Step-by-Step Process

1. **User opens a ticket** by clicking a panel button in the marketplace channel
2. **User selects a category** from the dropdown menu
3. **User fills in the form** with the required information
4. **Ticket channel is created** automatically under the Tickets category
5. **Bot pings the relevant role** (Vendors, Device Vendor, or Staff)
6. **A vendor or staff member claims the ticket** by clicking the Claim button

7. **The deal or support session takes place** inside the ticket channel
 8. **Staff or vendor closes the ticket** by clicking the Close button
 9. **Bot saves a full transcript** to the logging channel
 10. **Ticket channel is deleted** after 5 seconds
-

Role Permissions

Who Can Do What

Action	Staff	Vendors	Device Vendor	Everyone
Open a ticket	✓	✓	✓	✓
Claim CODM ticket	✓	✓	✗	✗
Claim Device ticket	✓	✗	✓	✗
Claim Support ticket	✓	✗	✗	✗
Close a ticket	✓	✓	✓	✗
Add/Remove users	✓	✓	✓	✗
Run <code>/setup</code>	✓	✗	✗	✗
Send <code>/panel</code>	✓	✗	✗	✗
Manage vendors	✓	✗	✗	✗

Note: A vendor can be given both `@Vendors` and `@Device Vendor` roles if they deal in both CODM accounts and devices.

Vendor Management

Vendors must be registered using the `/add-vendor` command before they appear in the vendor selection list.

Adding a Vendor

```
/add-vendor user:@username name:Vendor Display Name
```

The vendor will now appear in the vendor selection dropdown when users open a Vendor Ticket.

Removing a Vendor

```
/remove-vendor user:@username
```

The vendor will be removed from the dropdown list immediately.

Transcripts

When a ticket is closed the bot automatically generates a full HTML transcript and sends it to the configured logging channel.

What is Saved

- All messages in the ticket
- User avatars and usernames
- Embedded messages and ticket form answers
- Images permanently embedded in the file
- Video and file attachments as download links
- Timestamps for every message

How to View a Transcript

1. Go to your `#logging` channel
2. Find the transcript embed for the ticket
3. Download the attached `.html` file
4. Open it in any web browser (Chrome, Firefox, Safari)

The transcript renders in a Discord-like dark theme UI making it easy to review conversations.

Deployment

The bot is hosted on **Render** (<https://render.com>) and runs 24/7.

Keeping the Bot Awake

UptimeRobot (<https://uptimerobot.com>) pings the bot every 5 minutes to prevent it from going to sleep on the free Render plan.

Updating the Bot

To push code updates to the live bot:

1. Make your changes in VS Code
2. Push to GitHub:

```
bash  
  
git add .  
git commit -m "Your update description"  
git push
```

3. Render automatically detects the push and redeploys within 2-3 minutes

Environment Variables

The following environment variables must be set in your Render dashboard:

Variable	Description
TOKEN	Your Discord bot token
CLIENT_ID	Your bot's client ID
GUILD_ID	Your Discord server ID

Troubleshooting

Bot is offline

- Check your Render dashboard — restart the service if needed
- Verify your bot token is correct in the environment variables
- Check UptimeRobot to make sure it is pinging correctly

Interaction failed error

- Make sure you ran `/setup` after the bot came online
- Delete old panel messages and resend fresh ones with `/panel`
- Restart the bot on Render

Tickets not created

- Make sure the bot has **Administrator** permissions in your server
- Verify the ticket category ID is correct in `/setup`
- Check that the bot role is above other roles in your server settings

Transcripts not saving

- Make sure the logging channel ID is correct in `/setup`
- Verify the bot has permission to send messages and attach files in the logging channel

Slash commands not showing

- Wait up to 1 minute for Discord to refresh commands
- Try closing and reopening Discord
- Re-run `node deploy-commands.js` if needed
